

## BS8555 and ISO 14001: 2004 Environmental Management System

We at Samuel Grant Ltd. are proud to announce that we are implementing an environmental management system (EMS) in order that we can understand, influence and reduce the environmental impact of our business activities.

Part of the implementation plan is to communicate our environmental intentions and policy to our customers, suppliers and all interested parties.

All of our staff is aware of the need to reduce our environmental impact while remaining a profitable company. To this end we have initiated a series of company objectives which will allow us to reduce our environmental impact and we look forward to working together in an environmentally sensitive manner.

We are also implementing the BRC Global Standard for Packaging and Packaging materials. This follows on from our ISO 9001:2001 certification achieved in November 2006 and firmly establishes our commitment to quality, the environment and global standards required, through carefully documented procedures
