# introducing **Samson Nano**

The NEW high performance, superior strength and quality machine stretch film from the Samuel Grant Group.

**A composite 33 layer machine film, using next generation extrusion technology and high grade resins for maximum strength and performance. Perfect for high volume applications running at full machine speeds.**

Introducing **Samson Nano**, wrapping more for less!

- Composite 33 layer superior strength and quality machine stretch film using next generation extrusion technology.
- >300% Pre stretch capability.
- Performance and quality guaranteed – and we mean guaranteed which is why we put our name on it!
- Significant cost savings per pallet and consistently out performing conventional film in trials.
- No loss of puncture resistance or load containment.
- High clarity for barcode scanning.
- High slip outside, so no pallet to pallet adhesion during transportation.

Samson Nano is the next generation in extrusion technology incorporating high performance resin blends; The ultimate combination. A full and detailed cost savings analysis is available with a free site consultation to evaluate your current wrapping methods. Our specialist technical film consultants offer exceptional back up and support throughout the UK.
